

Image Capturing for Dataset Creation

1. Install “Open Camera” app by Mark Harman

After installation, do the following settings modifications:

Also do the following settings modification if you want to:

>> **Settings:**

>> **Photo Settings:**

>> **Camera Resolution**

>> Choose "1088 x 1088 (1:1, 1.18MP)" Basta kamu lang bahala, basi ga lain ang options sa different devices. I recommend **1:1 scale ratio or any rectangular frame para dina mag crop**. Na gg kami ligad sa crop daan HAHA.

>> **Optimise Focus for... :**

>> *Quality*

>> **Image Quality**

>> *100 percent*

>> **Image Format**

>> *JPEG*

>> **Processing Settings:**

>> **Edge Mode Algorithm:**

>> *High Quality*

>> **Noise Reduction Algorithm**

>> *High Quality*

YOU CAN ALWAYS RESORT TO YOUR OWN PREFERENCES, METHODS, APPS TO USE, ETC... BUT DO TAKE NOTE OF THE FOLLOWING BEFORE CAPTURING...

Necessity in capturing an image.

1. Must have a blue background (***Sky Blue velum paper***).
2. Well lit lighting condition, in my case I have use a daylight bulb for illumination.

Here, there is very minimal shadow cast here. Also take into consideration the size of the onions. It is not that small and also at the same time, it is not that large. You can make some changes in size to your image as long as it is not that very small or very large. May the picture above serves as your reference.

Here, we have also included in the data set about possible shadow casting of onions. Meaning, it is also affective to trained the model using images of onions that has shadow.

Take into consideration about the position of onions in the background. Try different positions, different angles, different shadow positions, different lighting. You can also change zoom level of onions, you can make it a little bigger or a little smaller. Changes in factors such as illumination, position, shadows, angles, size, etc., makes the data set more efficient and increases accuracy.

Below is the link of the data set that was utilized in the partial completion of our capstone. Make this as your full reference.
